

**Students at the University of South Carolina struggle to keep track of their retail meal swipes because the balance is only available through a separate app.**

**The current system forces students to manually count their remaining swipes, which is confusing and inconvenient. As a result, many students end up losing hundreds of dollars in unused meal swipes each semester. By integrating the retail meal swipe balance directly into the pre-existing Grubhub app already in use for campus dining. This solution ensures that the process would be seamless and efficient, ensuring that students can easily manage and fully utilize their meal plans.**
